

Quick User Guide

Agon 27.5” by Whee Sports

Max Speed: 32Km/h	Max Range*: 60Kms	Max Loading: 120Kg
Max Climbing Gradeability: 34°	Net Weight: 29Kg	Charging Hours: 5 – 6 hours

*Range is subject to motor assist modes, riding speed, loading weight and road conditions

Agon come with two motor assist modes:

- a. Pure Throttle – The easiest way to ride an ebike. Press down and hold the throttle, the motor will start to assist until it reaches pre-set speed at current selected assist system level; Release the throttle, the motor will stop.
- b. Pedal Assist – Are you afraid of missing the riding experience when switching to ebikes? Not at all. With the Pedal Assist mode, the motor will start to assist once you pedal. This will give you a better acceleration while pedaling; and extend your riding range that a normal bike can't ever reach.

How to Use:

Press and hold the “Power Button” or “i” on the controller until the display is on. You can see the Speedometer, Current Assist System Level and others info are indicating on your display.

Use the following instruction to choose your preferred displaying info selections:

1. Press “+” or “-” once to shift pedal assist system level. From 0 – 5, each level has a pre-set Max Speed. NOTE: When choose “0”, the motor will not assist.
2. Press “+” and hold it until turn on the headlight
3. Press “-” and hold it to use the Walk Mode
4. Press the Power Button once to switch among different display info mode: Trip->Odometer->Avg Speed->Max*->Time->KCAL->POW
 - a. Trip: indicates the current trip from turn on
 - b. Odometer: tracks all kms through the lifespan
 - c. Avg Speed: tracks the current trip's avg speed
 - d. Max: shows pre-set Max speeds for current assist system level
 - e. Time: tracks how long you are riding at current trip

- f. Kcal: shows the current trip's kilocalories burned
- g. Pow: indicates instant motor power output in KW

Charging Procedure:

1. Press and hold the power button on the controller until the display turns off.
2. Charging:
 - a. Plug the charger into the battery's charging port on the bike frame.
 - b. Use the key comes with the bike to unlock the battery chamber and take the battery out; Plug the charger into the battery's charging port
3. Plug the charger into a power outlet. Connect the charger input plug (110-220V) to the power outlet. Charging should start and will be indicated by the charger status light on the charger turning red. Once the battery is fully charged, the charging will stop automatically.
4. Unplug the charger from the outlet, then the charging port. Once fully charged, indicated by the charger status light turning green, disconnect the charger from the outlet then the charger from the battery by pulling directly on the plugs, not the wires themselves.

CAUTION: Anytime charging the battery, please check the battery, charger, and electrical cables for signs of damage.
